

CERTIFIED PRACTITIONER

THE OMNI-WIN GAME OF PRACTICE

We are building new senses for groups, so that what they learn to see, they can learn to value.

@Javeline · first community: Liberating Structures · built as a NAOMS app with Mujo

A visual edition of *Certified Practitioner*, response to *Kitestring* draft 3, version 2. Where this edition and that document differ, the document wins. D-numbers point to its Decisions and numbers table.

PRACTICE MADE VISIBLE, TRUSTED AND SELF-FUNDING

Certified Practitioner is a community-owned certification program. It makes practice visible, sells what that visibility is worth, and pays the people who make it valuable. D1

WHY PLAY

The tools we think with become part of us. Liberating Structures take that collective: a group thinks about how it wants to think, together. The arc runs from mechanical to mystical. First you learn the game rules, then the games become how you see and move through the world.

The cornerstone of new tools is relationships made legible. What gets perceived can be accounted for. New senses make a new accounting possible.

THE WORLD

We are a large organization that is not organized. Certified Practitioner lets us federate into a **trench-coat totem pole**: coherent enough to pass as a large organization to the enterprises that buy learning, while staying a community underneath.

The stars are the **user groups**, the people already using these tools wherever practice happens. D5

DESIGN PILLARS

Paint on the road, not crash barriers

Every claim is admitted and shown with how well it is evidenced. People judge. Money is the one exception: it moves only by fixed rules and signer thresholds. D161

My deck first

Every practitioner's home deck comes first, everywhere, whatever the votes say. A platform right for everyone, not a privilege.

D10, D175

Omni-win

The common pool is a player too: its needs are counted alongside everyone else's. Nobody takes a cut outside the flow. D79, D85

You can found it, not own it

Stewards are elected and removable, money needs several signers, and the commons sets the rules. D159, D166, D200

Players win

A portable, trusted record of practice, and a route to a livelihood through serving the community.

Groups win

Legibility: where practice is active, what works, who is ready, with no lists to maintain by hand.

The commons wins

A funded pool, a living wiki and courses that write themselves.

PLAY A SESSION. LEAVE A TRACE. LEVEL UP.

Every step is one of the deck's cards. Nobody designed a form. No one has to type a record. D124

1 • Play

A session runs on the host's deck; everyone sees the host's cards first. D14

2 • Pick cards

Pick the cards played from a list. Name the designer, deliverer and players. Camera and voice return if this proves too slow. D124

3 • Traces + RoTI

Photos of the traces, then the Return on Time Invested. Depth grows with the giver's phase later. D53, D117

4 • Positive Gossip

The co-signature. A session is co-signed when enough distinct, verified players send it. Guests show on the record but don't count. D30, D184, D119

5 • Data Wash

Per entry: publish under your name, anonymized, or withhold. From the very first data in. D51, D205

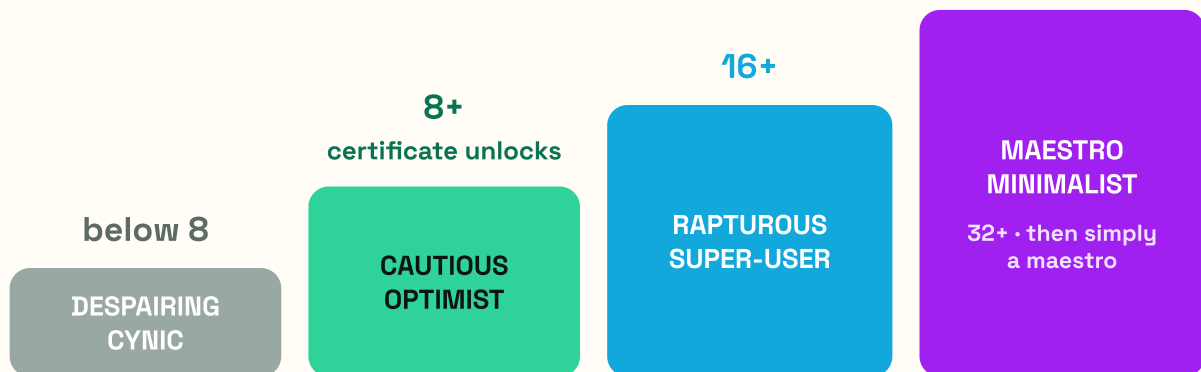

6 • Level up

Your ecocycle stage per pattern and your phase are computed from the record. Nobody fills them in. D28, D30

Records stay open for late signatures (D120). Anyone can correct, withdraw or take themselves out of a record. Download the whole session as a package for your own AI agents, for example as an MCP server (D65).

THE LADDER: FROM CYNIC TO MAESTRO

One shared rubric, so a 16+ in Utrecht means the same as a 16+ in Rotterdam. Your phase counts the patterns you have in use. D22, D23

EACH PATTERN HAS ITS OWN ECOCYCLE

STAGE	MEANS
Gestation	Never seen it
Birth	Led through it
Maturity	Hosted others in it
Creative Destruction	Enabled someone else to host it

"Patterns in use" counts Maturity and beyond. People reached, diversity of settings and design goals achieved show as plain counts. D25, D29

NO CEILING ON THE DECK

Every pattern card counts. A new card counts once it has been accepted, revised and used by enough different hosts. D26, D27

HOSTS FROM 2+ GROUPS: PROPOSAL

EVIDENCE LEVELS, SIDE BY SIDE

Your phase is computed at each evidence level and shown side by side. The certificate uses the co-signed phase. D30, D161

LEVEL	COUNTS TOWARD
Personal claim, imported history	Phase "including claims"
Attestation, Scribe evidence	Shown on the record
Peer co-signature	Co-signed phase → certificate
Content, artifacts, dates	Raises confidence
Witness network shape	After the trust wire
Community seal	Optional endorsement

Imported past sessions count as claims at their evidence level. They never reach a certificate or a seal without co-signatures. D20, D34

The reward: a certificate of practice

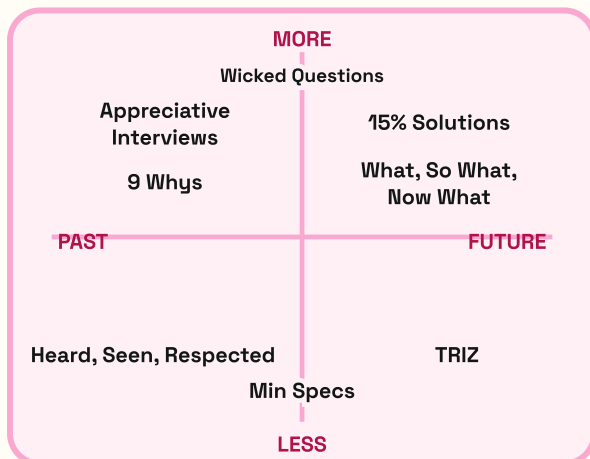

Issued from the computed record, signed by the relevant user groups (and the LS Commons, presumed). It states the record and its evidence profile, never competence, and shows how many distinct people witnessed it. Unlocks at Cautious Optimist. One fee everywhere: €100 during the hatch, changed only by the commons. Certifying a record is always free. D160, D162, D185, D201, D69, D32

SEVEN COLOURS, FIVE DESIGN ELEMENTS

If the app records each card's category and the setting of its knobs, every session record becomes the design made explicit. D107

COLOUR	CATEGORY	WHAT IT ENCODES	DESIGN ELEMENT
 Dark green	Meta-games: situational assessment	Seeing and sensing the group and its situation	Purpose and context
 Light green	Meta-games: design and deliver	Designing the intervention and delivering it	Purpose and context
 Purple	Artifacts: maps and traces	Maps orient a conversation; traces record where the group was	Materials and space
 Light pink	Question compass	Questions that point a conversation in a direction	Invitation
 Pink	Question strings	Sequences of questions	Invitation
 Blue (roles)	Interaction: roles	Scribe, Time Lord, Vibe Canary	Distributing participation
 Blue (groups, steps, time)	Interaction: configuration	Group size and how time is spent	Groups; steps and time

THE QUESTION COMPASS

Ask for a question that points toward the future and toward less, and get TRIZ. D109

THE KNOBS

Group size

solo · pair · trio · four · larger

Group stability

stable, or groups that shuffle

Minutes per person per question

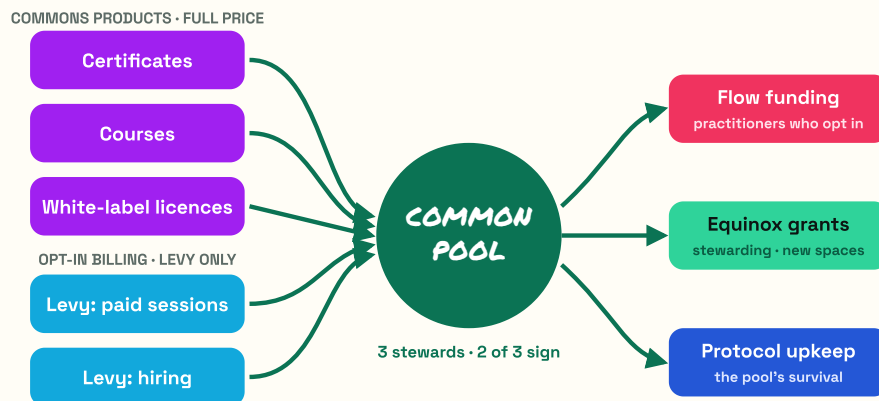

tight to spacious, or unbounded. The deck's own unit of time, comparable across group sizes. D110, D111

Everything specific to Liberating Structures (deck, taxonomy, rubric, vocabulary) lives in data, so another community can swap it. D106

A CERTIFICATION PYRAMID SCHEME, UPSIDE DOWN

Money follows appreciation and use until people's stated needs are met, and the common pool is one of the recipients. Pay for contribution, never for recruitment.

D168

THE FLOW, STEP BY STEP

- **Fill first.** The pool only fills; nothing goes out until flow funding starts. D163
- **Unlock.** When the pool covers one season of the survival thresholds people have asked for, the next equinox gathering votes to start. That vote adopts the flow rules; Javeline abstains. D165, D169
- **Signals.** Appreciation and use, equally weighted, from co-signed sessions only. Everyone gets the same appreciation budget per season.
WEIGHTS: PROPOSAL D80, D183
- **Thresholds.** Each recipient declares survival and thriving, in public, before each equinox. Any member can question one in a Happy Money Story round. D81, D167
- **Fill order.** Survival first, then thriving. PROPOSAL D83
- **No overflow in the hatch.** Anything above thriving goes to the pool. D84

HOUSE RULES

Never sell the claim

Money buys learning, practice and a formal document of an earned record. Never a record that wasn't earned. D72

Pay for use, never headcount

Adopting a deck and "learned from" lineage bring recognition and phase, never money. D168

Your fee stays yours

A practitioner's own fee is theirs; a session split shares that session's income by Happy Money Story. D77, D97

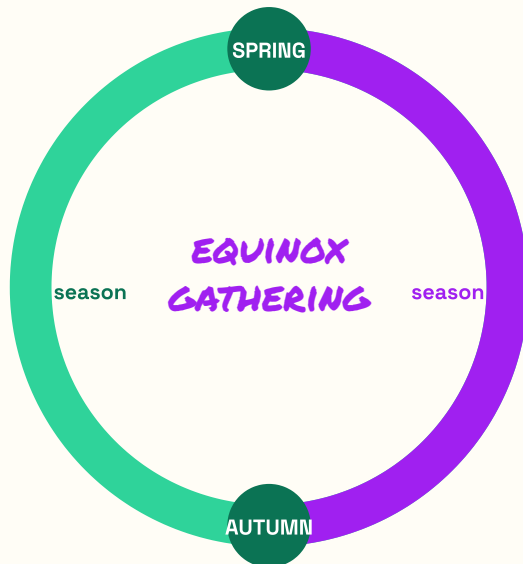

Sufficient, not large

Governance follows stewardship recognised by peers, never earnings. D86, D87

Euros through the Monerium rail (D98). Grants: twice a year, several signers from several groups, capped per equinox, never to a signer, their group, family or payer (D164, D190). Tokens wait until the pool is large enough (D99).

THE GAME TURNS AT THE EQUINOX

The work happens through the season. Twice a year, at the spring and autumn equinox, the community settles, decides and welcomes. D80, D164

AT EVERY EQUINOX GATHERING

- Published thresholds are questioned and settled by Happy Money Story. D81
- Flows are settled from the season's co-signed records. D80
- Grants from the pool, shared by Happy Money Story. D164
- Steward requests are evaluated. D199
- New communities are welcomed; they join by open invitation. D136
- The experiment's measures are published; the commons can review it. D171
- The gaming risks are discussed and evaluated. D203
- Groups reflect through their network webs: which patterns and people do we want more of? D198

Stewards

Anyone may ask to be recognised. Elected unanimously by existing stewards, from different user contexts. Removable by a majority of members who vote. D199, D159

The commons

Members vote in their own group; a decision needs a majority of participating groups and is signed by stewards from several groups. Framed by Ostrom and the LS principles. D166

Founder limits

Javeline nominates the 3 pilot stewards once; the power ends when they are seated. No standing seat. Abstains on the flow-rules vote. D199, D35, D169

THE HATCH

PILOT 1 STARTS

pool fills

START VOTE

≥ 13 months of flow funding

PARAMETERS CONVERSATION

hard maximum: 2 years from the start of pilot 1 • leaving and forking are rights (D177, D178)

Starting values are confirmed by the pilot group at the start of pilot 1, with Javeline abstaining, and can be changed the same way (D170). The pool's keys: the 3 pilot stewards, any 2 of 3 sign (D200).

THE RING OF FOUR, AND WHAT STOPS IT

The cheapest attack: a small circle that co-signs itself. Here is every defence, its status, and the risks we accept in the open.

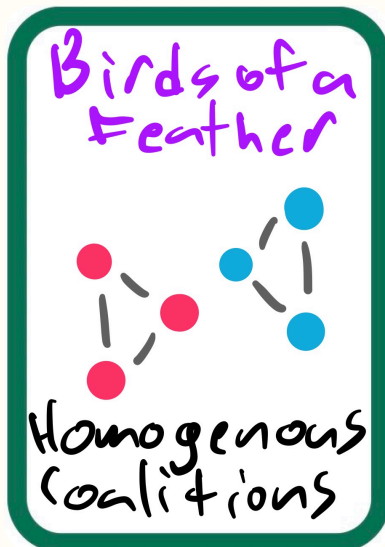

SIGNAL	DEFENCE	STATUS
 Positive Gossip	Only distinct, verified members count; one appreciation budget per member per season D184 , D183	DECIDED
 Certificates	Show the distinct-witness count; buyers judge D185	DECIDED
 Use of entries	No pay when the author was in the session; once per host per season D187 . Only the host records use D188	DECIDED PROPOSAL
 Money before the trust wire	The pool only fills in pilot 1; outside the pilot community, appreciation only D163 , D172 . Only announced sessions count D186	DECIDED PROPOSAL
 Commons votes	A group counts after a full season with enough co-signed members D189	DECIDED
 Grants	Never to a signer, their group, family or payer D190	DECIDED
 Thresholds	Public and questioned at the equinox D81 ; unsettled challenges to the commons D191	DECIDED PROPOSAL
 New cards	Hosts from at least two user groups D192	PROPOSAL
 Wiki and course votes	Shown at each voter's evidence level D151 ; only members with a co-signed record D193	DECIDED PROPOSAL
 Seals	Stewards who witnessed much of a record can't seal it D194	PROPOSAL
 Lineage	Never pays D168 ; trust edges only from counter-signed credentials D195	DECIDED PROPOSAL
 Payouts	Fixed, published inputs, checked by signers before money moves D197 ; overflow rules when designed D196	PROPOSAL

Accepted risks: paint on the road [D203](#)

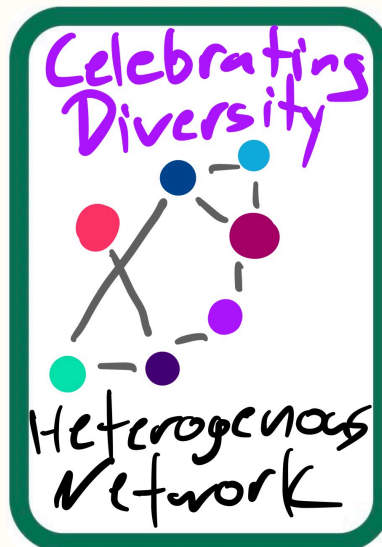

A circle can still co-sign itself to a certificate, but the certificate shows how few witnessed it. Collusion inside the pilot can't be seen from the network's shape until the trust wire. Using someone's tip stays a host's claim. One person, one account depends on NAOMS. We discuss and evaluate all of these at every equinox.

NAME THE WEB, THEN MAKE A MOVE

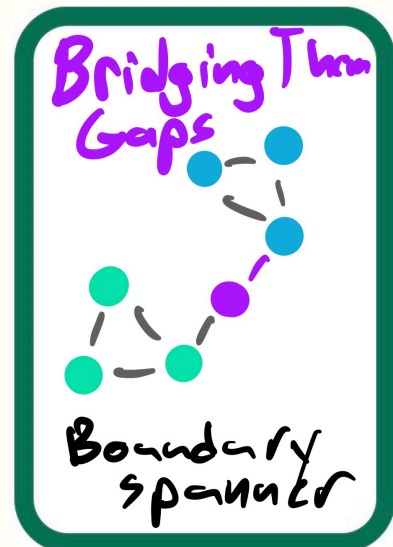

The network pattern cards label a session's context and a person's position, and every label offers a next move. Descriptive, never paid. ^{D198}

Birds of a Feather. Move: invite someone from another group

Celebrating Diversity. Move: keep this mix together

Bridging the Gaps. Move: introduce the two groups directly

ON A PROFILE

Bridging the Gaps	links groups that otherwise don't meet
Flat Hierarchy	many practise with them, not with each other
The Inner Circle	part of a tight core
Periphery	linked through one or two people
New Kids on the Block	practises alone or once so far
Gatekeeper	the only link between two sides

Opt in to being shown. Before the trust wire, pilot community only. **MOVE WORDING: PROPOSAL**

THE PUBLIC DASHBOARD

PROPOSAL

The community-wide view falls out of the records. No more user-group lists maintained by hand. ^{D100}

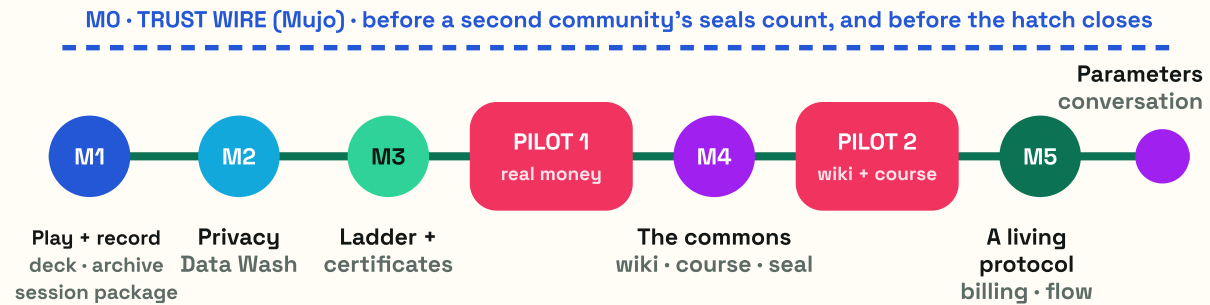

- Time to record · Gossip completion
- Witness diversity · Certification funnel
- Repeat sessions · Data Wash uptake
- Journal activity · Revenue and flow

Until the trust wire ships, anything crossing communities shows per community, labelled "self-reported, not yet cross-verified", never as a flat zero. ^{D173, D102}

TWO PILOTS, THEN THE WORLD

The priorities say what we protect when build time runs short, not the build order. Certification first, then the commons and its courses, then the marketplace.

D174, D158

PRIORITY	GOAL	IN PILOT 1	PILOT 2	LATER, WHEN...
0	My deck first, my archive in	Home deck first; archive as claims; review queue	Imports into the wiki	—
1	Certified practice	Recording; ladder; certificates; stewards; the pool	Optional seal; OGD Eval	Camera and voice: recording proves too slow
2	Knowledge commons + automatic course	Data Wash; session package	Wiki; votes; course; cards	Curated courses and versions: the wiki has volume
3	Marketplace	Certificates are the one paid path	—	Seats, hiring, billing: certification is trusted
4	The network sees itself	A plain list of sessions and groups	—	Dashboard: pilot 2's wiki exists
5	White-label protocol	Everything LS-specific as data	—	Another community asks to run it

Pilot 1 runs in LS Go Online and the Wise Crowds Design Call, counted as one community; the certificate says so (D136, D157). Flow funding starts when the pool and an equinox vote allow it (D165). Full feature list: "The minimum: two pilots" in the response.

MIN SPECS: FIVE MUSTS, SIX MUST-NOTS

Run through Min Specs, the whole design reduces to these. Anything not on these lists is negotiable. ^{D123}

MUSTS

MUST	PILOT 1	PILOT 2
1 · Recorded and co-signed by gossip; no one types a record	MET	MET
2 · Credentials become trust edges	WAITS	WAITS
3 · Phase computed from records	MET	MET
4 · A user group seals	dropped: the seal is optional (D127)	
5 · Certificates through the app, every flow visible	MET*	MET
6 · Contributors choose, votes sort, a course writes itself	PARTLY	MET

Must 2 waits under an exception decided 2026-10-06: one pilot community, no cross-community numbers (D125, D157). Must 6 completes in pilot 2 by the two-pilot split (D158). *Only if the euro rail is on and the refund rule holds.

MUST-NOTS

Never sell the claim

Never pay for recruiting

No share outside what the commons decides

Never show a number the trust wire can't support

Never hardcode Liberating Structures

No cross-community seal before the trust wire

D130, D157

Licence

The Liberating Structures material, Javeline's videos and Javeline's deck are under CC BY-SA 4.0: no non-commercial term, ShareAlike carries to the wiki and courses. People pay for curation, live updates and certification, not exclusive content. New cards are marked as community riffs, distinct from the core. ^{D61-D64} **FIELDBOOK COVERAGE: ASSUMPTION**

WHAT STANDS BETWEEN US AND PILOT 1

Every open question has an owner. These are the ones pilot 1 waits on; the full list is in the response's "Still open" and "Questions for NAOMS".

Mujo • NAOMS

- Switch on the Monerium euro rail; can it run 2-of-3 and pay refunds?
- Check the refund rule against EU consumer law
- Verify one person per account
- The certificate's credential format
- Size Data Wash; test what draft 3 says exists

Javeline and Mujo together

- Funding the build before revenue.
PROPOSAL request ecosystem funding via Kevin or Maurits (D206)
- The lawful basis for transcribing old recordings that show other people

The pilot group

- Confirm the starting values, including the refund rule and the course price (D170)

Javeline

- Trademark and domain check on the name, before the first certificate is sold (D204)

NEXT: BEFORE FLOW FUNDING STARTS

How the records carry appreciation (Mujo), who signs payouts, tax on payouts, and nine anti-cheat proposals waiting on Javeline (D186, D188, D191–D197). The commons adopts the flow rules in the start vote (D169).

**CAPACITY MADE VISIBLE,
OWNED BY THE PEOPLE WHO HAVE
IT,
TRUSTED BECAUSE A COMMUNITY
STOOD BEHIND IT.**

Draft 3's closing line, and the whole argument in one sentence.
